

CANNABINOID CONCENTRATE HANDLING INSTRUCTIONS

CBG ISOLATE

Your product will be labeled with the following information:

Description of the product, mass of product, tare weight (TWL) of the container including the lid or cap, batch number (referenced by a Certificate of Analysis - COA)

Cannabigerol (CBG) Isolate is a crystalline powder that is 99%+ pure cannabigerol. It is derived from the hemp plant, but all other matter from the hemp plant is removed, including waxes, oils, chlorophyll and other phytocannabinoids.

To ensure the accuracy of formulations and analytic tests, please observe the following guidelines:

Verify the amount of material received by weighing the entire container, including the lid and subtracting the tare weight on the label.

Store CBG isolate in a cool, dry location away from direct sunlight and UV lights. Recommended storage temperature is 68-77° (20-25° C)

Cannabinoids are adversely affected by light, oxygen and moisture. **DO NOT** store in warm areas (above 80° F) or cold areas (below 60° F) for prolonged periods of time. This may cause sweating, thus creating moisture which will damage the product.

CBG isolate powder **DOES NOT** mix water, but is completely soluble in most oils at 140-176° F (60-80° C)
